AQS Notes for December 14, 2012 Regular software deployment & General info

Topics:

Security Changes (update)
AQS software deployment schedule for 2013
AQS conference information
Standard Reports – how you are notified if your report fails to run
Additional Report Entries under "Retrieve Reports" tab
PM NAAQS and impacts on AQS

1. Security Changes

Further clarification on the security changes enacted in October:

<u>Online</u> uses the "old" security model of screening groups. Can insert/update/delete monitor metadata or raw, precision or accuracy data, but you must log into AQS using the appropriate screening group for the monitor.

<u>Batch</u> (for raw data only) uses the "new" security model, which continues access for users who are in screening groups, but also allows access for users associated with a monitor's PQAO. Can add/insert/delete raw data for a monitor that is not in your screening group only if all 3 of the following conditions are met:

- 1. The monitor has a PQAO. (PQAOs were required after January 1, 2007)
- 2. The agency code on your AQS user profile = the agency code of the monitor's PQAO
- 3. You have the "Raw Data Update" role for a screening group.

You must process these transactions via Batch: Submit the file containing the transactions to AQS via the ENSC, and on the "Express Request" form, make sure to use a screening group for which you have the "Raw Data Update" role. (Choosing a screening group for which you don't have the "Raw Data Update" role will cause the file to fail during Stage.)

2. 2013 Software Deployment Schedule

The AQS Team will be deploying regular software updates (i.e. "patches") to AQS on the enclosed monthly schedule for CY 2013.

While regular deployments are done during offhours and usually have minimal impacts, it is possible that AQS may be temporarily unavailable at these times.

Major deployments of new software may be done at other times, and would be communicated to AQS users in advance.

| AQS 2013 Patch Deployment Schedule |
|------------------------------------|
| January 18 |
| February 15 |
| March 22 |
| April 19 |
| May 17 |
| June 21 |
| July 19 |
| August 16 |
| September 20 |
| October 18 |
| November 15 |
| December 13 |

3. AQS conference

We will not have a conference in 2013. Instead, we will be part of the next National Air Quality Conference - Ambient Monitoring in spring of 2014.

4. Standard Reports – how you are notified if your report fails to run

Reports can fail for a number of reasons; common causes are that a report is too large or the AQS Reports server is down. We have added an additional report status of "Failed – Call Helpdesk." If you encounter a problem with an online report, you may try submitting the online report via batch. If a problem persists, call the EPA Helpdesk level 2 AQS support (866-411-4372).

If an <u>online report</u> fails, the "Report Progress" dialog will show:

| 🧟 Report Pro | gress | | _ |
|--------------|---------------|--------------------|----------------------|
| | | Report Progress | |
| | | | |
| | | 0 Percent Complete | |
| Report Stage | Failed - Call | Helpdesk | |
| | | | |
| Refre | esh | Cancel Report | Exit Report Progress |
| | | | |
| | | | |

If a <u>batch report</u> fails, you will receive an email with a "Report Failure" notice (not a blank email as before.)

In either case, the "Retrieve Reports" tab will show report status:

| NJO AMP450 REPORT 10/11/2012 05:29 PM Failed - Call Helpdesk 0 NJO AMP450 BATCH 10/11/2012 05:29 PM Failed - Call Helpdesk 0 NJO AMP450 BATCH 10/11/2012 05:23 PM Failed - Call Helpdesk 0 | Criteria Set | Monitor Sele | ection Area Se | election | Sort Orde | r F | eport Options | Retrieve Reports | |

5. Additional Report Entries under "Retrieve Reports" tab

All reports from the Load, Stat/CR, and Post processes appear in the "Retrieve Reports" tab.

6. PM NAAQS final rule signed on 12/14/2012

- \triangleright The level of the primary standard for annual PM2.5 has been lowered to 12.0 μg/m3; the 24-hour PM2.5 standard remains at of 35 μg/m3.
- The level of the primary standard for 24-hour PM10 remains the same.
- ➤ The level of the secondary standards for 24-hour and annual PM2.5 and 24-hour PM10 remain the same, and these also address non-welfare visibility and PM-related visibility impairment.

What impacts will this have on AQS?

- AQI breakpoints for PM2.5 will change and recalculations will be done in spring 2013.
- Design Value Report calculations will be updated in summer 2013.
- Quick Look Report will be modified later, as resources allow.
